

Provisional key to the British *Amauromyza* species

1. Distiphallus surrounded by a strong spinular membrane, 3+1 *dc* present.....2
 - Distiphallus not surrounded by strong spinular membrane, usually 3+0 *dc* [rarely 3+1], epistoma never present.....5
2. Frons and antennae yellow.....3
 - Frons and antennae black.....4
3. Femora yellow on distal third, distiphallus not possessing distinct tufts of setae [when viewed from above].....*Amauromyza luteiceps*
 - Femora with knees only narrowly yellow, distiphallus with distinct tufts of setae [when viewed from above].....*Amauromyza karli*
4. Halteres black.....*Amauromyza chenopodivora*
 - Halteres whitish-yellow.....*Amauromyza monfalconensis*
5. Frons yellow or brownish.....6
 - Frons black.....8
6. Third antennal segment yellowish.....*Amauromyza verbasci*
 - Third antennal segment black.....7
7. Frons bright yellow, legs black.....*Amauromyza flavifrons*
 - Frons pale brown or slightly darker.....*Amauromyza labiatarum*
8. Halteres white.....*Amauromyza gyrans*
 - Halteres black.....*Amauromyza morionella*
